Appl. No. 09/977,122

Amdt. Dated May 20, 2004

Reply to Office Action of November 20, 2003

Amendments to the Specification:

Please replace the Abstract with the following amended Abstract:

~~The invention relates to~~ A rollator ~~which~~ with a tubular frame assembly ~~comprising~~
includes a pair of U-shaped side frames connected by a front brace. ~~The~~ Each side frames also
have has a cross bar that extends between ~~the~~ front legs and ~~the~~ back legs of the frame. The side
frames are pivotably attached to the front brace so that the side frames can fold ~~inward~~ inwardly.
~~Further,~~ The rollator has a molded rigid seat that is mounted on pivot brackets to allow it to pivot
~~upward~~ upwardly out of the way of the user. The pivot brackets have an offset axis of rotation so
that the seat ~~nestles~~ is arranged in a curved area of the front brace when pivoted upwardly.
